

Cyclope Internet Filtering

Internet became one of the most used and effective communication and business environment. Besides advantages, internet may bring profit loss generated by a decreasing productivity and endangered IT infrastructures. Nowadays, enterprises are searching for ways to improve their employees' productivity, secure their ICT infrastructure and prevent legal liabilities.

Cyclope Internet Filtering comes to help companies better manage a controlled internet access, by decreasing web browsing for personal use, eliminating explicit content websites from being accessed during working hours, protecting the network against online threats, and discouraging the download of unlicensed software and other copyrighted materials.

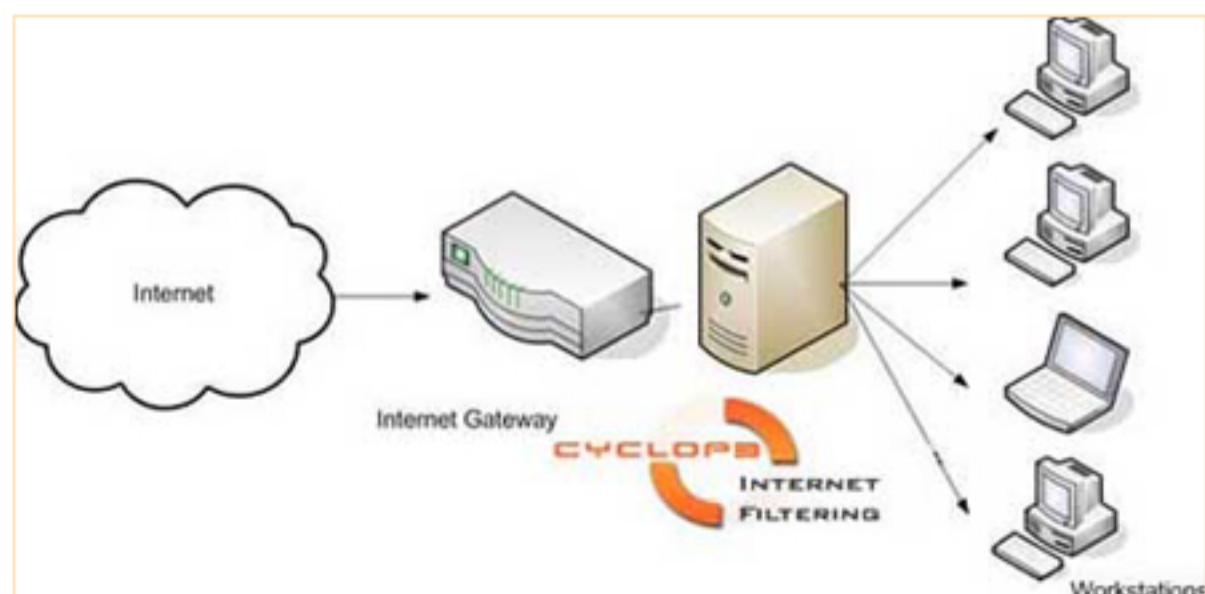

Cyclope Internet Filtering

Features and Benefits

- **Url and Content Filtering** - allows management to monitor and control the network use and abuse. According to the chosen filter, Cyclope can either block access to specific websites or allow specific web sites to be accessed while all other are blocked based on keywords or Url patterns and Url black lists.
- **Detailed Reporting and Consolidated Statistics** - allows management to monitor internet traffic and breaking rules attempts
- **Aggregated Statistics** for longer time periods allow for strategic planning and resource allocation.
- **Protection against file downloads** at management discretion
- **Scheduler** - the capacity to calibrate a specific user list through a scheduler unrelated to active filters.
- **Easy Management** of monitored user lists through a user friendly **Web Interface**.
- **Internet Sharing** provides the possibility of Internet access to multiple computers through a single Internet connection.
- The **Cost Effective Solution** provides strict traffic control, allows company to enforce its policy while Web Security is assured.
- **Designed for Windows Platform**, Cyclope Internet filtering proxy supports all internet connection types including dialup, cable modem, ISDN, DSL and ADSL.

How it works?

Cyclope Internet Filtering Proxy monitors the entire Internet traffic and blocks the access to websites and files according to the chosen filter. The requested web pages are displayed only if they comply with the specified filters.

Accurate and detailed statistics

Filter Configuration / Web Sites
